COMBINED TECHNICAL SERVICES EXAMINATION (DIPLOMA / ITI LEVEL) COMPUTER BASED TEST

DATE OF EXAM: 15.11.2024 AN

PAPER - II - ARCHITECTURE

(DIPLOMA STANDARD) (CODE: 323)

1.	Match:		
	(a)	Plinth Area	
	<i>a</i> >	T31 A	

1. Area used for movement

2. Covered area of a building measured at floor level

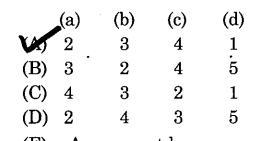

(c) Carpet Area

3. Clear covered area of a building

(d) Circulation Area

4. Useful area in a building excluding kitchen, staircase, verandah, etc.

5. Area used for vertical movement

- (E) Answer not known
- 2. The value of a property at the end of the utility period without being dismantled is called as ———— value.
 - (A) Sentimental value

(B) Salvage

(C) Market

(D) Book

- (E) Answer not known
- 3. Estimated cost is increased by 5% for any Unforeseen items which is known as
 - (A) Over head charges
 - (B) Work charged establishment

Contingencies

- (D) Supervision charges
- (E) Answer not known

4.		estimate should be prepared with a comparative abstract form showing the variations of quantity, rates with that of the original estimate.						
	(A)	Supplementary	(E) Revised					
	(C)	Annual maintenance	(D) Approximate					
	(E)	Answer not known						
5.		works are recorded	in square metres.					
	(A)	Stone	(B) Brick					
	Ver	Plastering ·	(D) Concrete ·					
	(E)	Answer not known						
6.	The	The floor finishing are measured in ——— units.						
	(A)	$ m m^3$	(B) Tonne					
	(C)	Kg/m	m^2					
	(E)	Answer not known						
7.	Bric	k work for arch is separatel	y measured in					
	(A)	Square metre	(B) Number					
	(O)	Cubic metre	(D) Running metre					
	(E)	Answer not known	· ·					
8.	Whi	ch is not included in the rep	ort?					
	(A)	Detailed specification	(B) Material statement					
	(C)	Design structure	Workers training					
	(E)	Answer not known						

9.	Identify the suitable word for the conditions relating to settlement of disputes						
	(A)	Workmanship	Arbitration (D) Bill of quantities				
	(C) (E)	Mode of payments Answer not known	(D) Bill of quantities				
10.		———— specification provides quality of final product.	detailed instructions regarding				
	(A)	General	(B) Technical				
	(C)	Standard .	(D) Brief				
	(E)	Answer not known					
11.	cons		ate approximate cost for the which is 2 times bigger than the cality.				
	(A)	Service unit method	(B) Plinth area method				
	VO	Cubical content method	(D) Typical bay method				
	(E)	Answer not known					

9.

12.	Mat	tch th	e follo	wing		
	(a)	Gene	eral ificatio	n	1.	Itemwise work
	(b)	Deta	iled ificatio	n	2.	Similar work
	(c)	Stan	dard ificatio		3.	Short and different part of work
	(d)	_	roxima		4.	Rough expenditure
	•	(a)	(b)	(c)	(d)	
		3	1	2	4	
	(B)	4	2	1	3	
	(C)	3	4	2	1	
	(D)	1	3 .	2	4	
	(E)	Ans	swer n	ot kno	wn	
13.	The	usal		a or li area	veable	e area of an apartment building is called
	(A)	Grc	oss			(B) Net
	Ver	Car	rpet			(D) Floor
	(E)	Ans	swer n	ot kno	wn	
14.					_	practice, what is the painting coefficient indows?
	(A)	2.6				(B) 1.6
	(C)	2.0				(D) 3.6
	(E)	Ans	swer n	ot kno	wn	

15.	Identify the painting coefficient for the fully paneled, braced, ledged or battened doors and windows							
	(A)	3.60	(3)	2.60				
	(C)	2.40	(D)	1.60				
	(E)	Answer not known						
16.	The	tolerances allowed in me	easurement	and calculations of area is				
	(A)	0.01 cubic metre	÷					
	(B)	0.01 running metre						
	(0)	0.01 square metre						
	(D)	0.01 tonne						
	(E)	Answer not known						
17.	The size of brick is 20 cm × 10 cm × 10 cm, then the number of bricks required for one cubic metre is ———————————————————————————————————							
	(A)	50	(3)	500				
	(C)	5,000	(D)	50,000				
	(E)	Answer not known	,					
18.	The weight of one cubic metre of steel is							
•	(A)	785 kg	·	7850 kg				
	(C)	78500 kg	(D)	0.785 kg				
	(E)	Answer not known						

- 19. The multiplying factor for painting collapsible gate measured flat (size of opening) all over is
 - (A) 1.3

(3) 1.5

(C) 2

- (D) 2.5
- (E) Answer not known
- 20. Capital value is equal to
 - Net income × Year's purchase
 - (B) Gross income × Year's purchase
 - (C) $\frac{\text{Year's purchase}}{\text{Net income}}$
 - (D) $\frac{\text{Year's purchase}}{\text{Gross income}}$
 - (E) Answer not known
- 21. In column, both end fixed the equivalent length is
 - (A) $L_e = l$

 $L_e = \frac{l}{2}$

(C) $L_e = 2l$

- (D) $L_e = \frac{l}{4}$
- (E) Answer not known
- 22. Generally beams and slabs should be designed as balanced sections, such designs are called
 - (A) Balanced design
- (3) Economical design

(C) Critical design

- (D) Limit state design
- (E) Answer not known

23.	In symmetrical columns with eccentric loading about one axis, the direct stress is less than bending stress, then the stress in the section will be of							
	(A)	Tensile nature						
	(B)	Compressive nature						
		Partly compressive and partly tensile						
	(D)	Only compressive nature						
	(E)	Answer not known						
24.	The maximum eccentricity of a load on a circular column section to have same type of stress is							
	VA)	One - eighth of diameter						
	(B)	One - sixth of diameter						
	(C)	One - fourth of diameter						
	(D)	One - third of diameter						
	(E)	Answer not known						
25.	A st	-	o an axial compressive force is					
	(A)	Beam	Strut					
	(C)	Slab	(D) Flat slab					
•	(E)	Answer not known						
26.		ne case of R.C.C footings under cribed as	the column, the minimum cover					
	(A)	40 mm	(B) 25 mm					
	(a)	50 mm	(D) 15 mm					
	(E)	Answer not known						
			·					

27. The partial safety factor used for material strength of steel at the limit state of collapse in IS 456-2000 code is

(A) 1.50

(B) 1.00

(C) 1.20

(1.15

- (E) Answer not known
- 28. The amount of reinforcement in the beam is more than the proper requirement of reinforcement, then the section is called

(A) Balanced section

Over reinforced section

(C) Under reinforced section ·

(D) Critical section

- (E) Answer not known
- 29. Stiffness factor for a beam simply supported at both ends is

(B) $\frac{4EI}{I}$

(C) $\frac{6EI}{l}$

(D) $\frac{8EI}{I}$

- (E) Answer not known
- 30. In cantilever slabs, the minimum thickness provided at free end is

(A) 50 mm

(B) 75 mm

100 mm

- (D) 150 mm
- (E) Answer not known

When the overall depth of web in a beam exceeds 750 mm, then the 31. side face reinforcement consisting of 0.1% of web area (B) 0.2% of web area (C) 1.0% of web area (D) 2.0% of web area (E) Answer not known A cantilever of span 'l' is fixed at 'A' and propped at other end B. 32. if it is carrying a UDL of ω per unit length, then the prop reaction will be (B) $\frac{5\omega l}{8}$. Answer not known (E) 33. Retaining wall is generally, constructed to retain Earth in hilly areas Water for irrigation purposes. (B) (C) Water in undulating ground Water in plain ground (D) Answer not known **(E)** 34. The following is not a component in the slope deflection equation

(B) Moment at supports

Shear force

Length at the beam

Slope at supports

Answer not known

(A)

(C)

 (\mathbf{E})

35.		- -	the end of fixed supports of a fixed ————————————————————————.					
	VI	Maximum, Zero	(B) Minimum, Zero					
	(C)	Zero, Minimum	(D) Zero, Maximum					
	(E)	Answer not known						
36.	In th	ne moment distribution met	hod "Carry-over" moment is					
	(A)	(A) The moment is distributed to the adjacent span						
	(B)	Half of the fixed end m member .	oment transferred to the adjacent					
	(C)	The moment of the suppor	t due to external loads					
	(D)) The total moment in the beam						
	(E)	Answer not known						
37.		moment to produce a unit at member is	rotation at the simply of supported					
	(A)	Stiffness	(B) Flexibility					
	(C)	Rigidity	(D) Ductility					
	(E)	Answer not known						
38.		theorem of three moment $(\Delta_1 + \Delta_2 + \Delta_3)$ where M_A , M_A	equation is MAL _A + MBL _B + MCL _C I _B , M _C represent is					
	(A)	Shear force						
	(B)	Deflections at mid span						
	(C)	External loads						
	(D)	Moment at the supports						
,	(E)	Answer not known	•					

39.	The	three hinged Arch can support ————— loads.							
	(A)	Axial loads only							
	VB)	Vertical and horizontal loads							
	(C)	Shear loads only							
	(D)	Moment loads only							
	(E)	Answer not known							
4 0.		If a fixed arch has two fixed supports, such that the total number of reaction components is							
	(41)	6 · (B) 4							
	(C)	8 (D) 2							
	(E)	Answer not known							
41.	Where does Reciprocal Ranging is employed?								
	(4)	When the two ends of a line are not intervisible							
	(B)	When one end of a line is inaccessible							
	(C)	When both ends are inaccessible							
	(D)	When the ends of the line are not visible even from intermediate points							
	(E)	Answer not known							
42.	The	sag correction on hill							
	(A)	is positive							
•	(B)	is negative							
	(C)	may be either positive or negative							
	(D)	is zero							
	(E)	Answer not known							

		•				
43.	A line joining some fixed points on the main survey lines, is					
	(4)	a tie line	(B) a base line			
	(C)	a check line	(D) a chord			
	(E)	Answer not known				
44.	The	following are the steps in Drav	wing a site plan			
	(4)	Site sketching, Scaling, Site	designing			
	(B)	Drawing, Dimensioning, Lett	cering			
	(C)	Picking, Labeling, Dimension	ning			
•	(D)	Establish, Scale, Reference, l	Height .			
	(E)	Answer not known				
45.		drawing that detail the directive accessibilities is	ction, neighborhood surroundings			
	(A)	a floor plan	(B) a elevation plan			
	(0)	a site plan	(D) a landscape plan			
	(E)	Answer not known				
46.	The	number of links in a Revenue	Chain is			
	(A)	66 links	(B) 100 links			
	(0)	16 links	(D) 50 links			
	(E)	Answer not known	• •			
47.		hain surveying the position ked by	of the stations are permanently			
,	(A)	Arrows	(B) Ranging rod			
	(0)	Pegs	(D) Ranging pole			
	(E)	Answer not known				
323-A	Archit	ecture 14				

- 48. The correction for the atmospheric refraction is equal to
 - $+\frac{1}{7}$ of the correction for curvature of the earth
 - (B) $-\frac{1}{7}$ of the correction for curvature of the earth
 - (C) $+\frac{6}{7}$ of the correction for curvature of the earth
 - (D) $-\frac{6}{7}$ of the correction for curvature of the earth
 - (E) Answer not known
- 49. Reciprocal levelling is employed to determine the accurate difference in level of 2 points which
 - Are quite apart and where it is not possible to set up instrument midway between points
 - (B) Are quite close and where it is not possible to set up instrument midway between the points
 - (C) Have very large difference in level and 2 instrument settings are required to determine difference in level
 - (D) Are at almost same elevation
 - (E) Answer not known

		· · · · · · · · · · · · · · · · · · ·								
50.		Cross-section method of s s-sections depends upon	indirect con	touring	, the s _l	pacing	of			
	(i)	Contour interval								
	(ii)	Scale of plan								
	(iii)	Characteristics of ground								
	(iv)	The instrument employed								
	The	correct one is		-						
÷	(A)	Only (iv)	(B) (i) a	and (ii)						
	(C)	(i), (iii), (iv)	(P) (i),	(ii), (iii))					
	(E)	Answer not known								
51.		A closed contour line with one or more higher ones inside it represents								
	(4)	a hill	(B) a p	ond						
	(C)	plane surface	(D) a d	esert						
	(E)	Answer not known								
52.	Select the correct procedure of plain table survey working operations.									
	(1).	Fixing the table to tripod			•					
	(2)	Centering								
	(3)	Levelling								
	(4)	Sighting the points	•							
	(5)	Orientation								
,	(A)	(1), (3), (5), (4), (2)	(B) (1).	, (5), (4)	, (3), (2)	•				
	Ver	(1), (3), (2), (5), (4)			, (3), (4)					
	(E)	Answer not known				•				

ეე.	Dala	Darancing of signes mean						
	(4)	Making the distance of the back sight station from in	foresight station equal to that of the astrument station					
	(B)	Making fore sight reading equal to back sight reading						
	(C)	Taking fore sight and back sight at same station						
	(D)	Making line of collimation horizontal						
	(E)	Answer not known						
54.	The instrument employed for finding the lines of highways with a pre determined percentage inclination is							
	(A)	Tangent clinometer	(B) Burel hand level					
	YOU	Fennel's clinometer	(D) Foot-Rule clinometer					
	(E)	Answer not known						
55.	The instrument employed for locating inaccessible points							
	(A)	Sounding sextant	(B) Nautical sextant					
	(O)	Box sextant	(D) Vibrating sextant					
	(E)	Answer not known						
56.	A pa	antograph is a device that 1	reproduces a map					
	(A)	On the same scale	(b) On any scale					
	(C)	On reduced scale	(D) On enlarged scale					
	(E)	Answer not known						

57.	The Parallax error in Theodolite is elliminated								
	(4)	By refocusing lens i	n proper position						
	(B)	By turning the eye piece							
	(C)	By centering the in	strument						
	(D)	By setting up the ir	strument						
	(E)	Answer not known							
58.	The latitude of the line is termed as southing								
	(A)) When the latitude of a line is positive							
	(B)	When the departure of a line is positive							
	(0)	When the latitude of a line is negative							
	(D)	When the departure of a line is negative							
	. (E)	Answer not known							
59.	If force bearing of a line is 0°, its back bearing is								
•	(A)	0°	(B) 90°						
	(0)	180°	(D) 360°						
	(E)	Answer not known							
60.	In a	Quadrantal Bearing	system, bearing is measur	red from					
	(A)	West							
	(B)	North							
	(C)	South	•	•					
	VD)	Nearest to south (or	c) nearest to north						
	(E)	Answer not known							

61.	•	Why are speeds of travelators typically limited to between 0.6 and 1.3 m/s?							
	(A)	To reduce maintenance costs							
	(D)	To ensure safe and easy entry and exit							
	(C)	To prevent excessive noise levels							

- (D) To accommodate larger loads
- (E) Answer not known
- 62. Choose the correct one:

Type of building that suitable for single automatic push button life system.

- (A) High-Rise office buildings
- (B) Large shopping malls
- Light traffic, low rise buildings (Nursing homes)
- (D) Airports and public transportation hubs
- (E) Answer not known
- 63. If a 42 mm copper tube has a pressure drop of 240 Pa per meter and the effective pipe length is 20 meters, what is total pressure drop?
 - (A) 1200 Pa

(B) 2400 Pa

4800 Pa

(D) 9600 Pa

(E) Answer not known

- 64. Why are air gaps in plumbing fixtures important for back flow prevention?
 - (A) They prevent pressure loss in pipes
 - (B) They allow water to drain faster
 - They prevent contaminated water from siphoning
 - (D) They help regulate water flow
 - (E) Answer not known
- 65. Why are booster pumps necessary in high-rise buildings for water supply?.
 - To maintain constant water pressure at all levels
 - (B) To prevent contamination of portable water
 - (C) To increase water supply for emergency situations
 - (D) To filter water for upper floors
 - (E) Answer not known
- 66. How does the design of a P-Trap in plumbing prevent the back flow of gases?
 - (A) It allows air to escape while blocking water
 - It seals off the drain using standing water in the curve
 - (C) It prevents water from draining too quickly
 - (D) It blocks sediment buildup in the pipe
 - (E) Answer not known

- 67. Why is sludge management an important aspect of sewage treatment plants?
 - (A) To recover valuable materials from sewage
 - To treat and dispose of solid waste safely
 - (C) To reduce the volume of waste produced
 - (D) To generate energy from waste
 - (E) Answer not known
- 68. Reason and assertion type.

Assertion [A]: Specific acoustic impedance is the ratio of the

sound pressure to the associated particle velocity.

Reason [R]: Air has low impedance, whereas concrete slab has

high impedance.

- (A) [A] is true but [R] is false
- (B) [A] is false but [R] is true
- Both [A] and [R] are true but [R] is not the correct explanation of [A]
- (D) Both [A] and [R] are false
- (E) Answer not known
- 69. Why are halons considered more effective than CO₂ in gas extinguishing systems?
 - (A) They are cheaper to use
 - (B) They are less harmful to equipment
 - They are five times denser than air
 - (D) They are easier to store
 - (E) Answer not known

- 70. Why do sprinkler systems use less water to control a fire compared to fire fighting services?
 - (A) They are designed to operate at higher pressure
 - (B) They use chemical solution instead of water
 - (C) They are less effective, requiring additional manual intervention
 - They provide rapid response that isolates and control the fire more efficiently
 - (E) Answer not known
- 71. Which type of lift has overall maximum travel distance limit?
 - (A) Electric passenger lift

Hydraulic passenger lift

(C) Goods lift

- (D) Paternoster lift
- (E) Answer not known
- 72. For building taller than 15 storeys, what type of lift is typically used?
 - (A) Low-speed cargo lifts
 - (B) Standard passenger lifts
 - High-speed express lifts that By-pass lower floors
 - (D) Manually operated lifts
 - (E) Answer not known

- 73. Why is the provision for refuge area in high-rise buildings important according to fire safety?
 - (A) To provide a space for fire fighter to set up equipment
 - To offer a safe place for occupants to gather in case evacuation is delayed
 - (C) To increase the floor area ratio of the building
 - (D) To store fire fighting equipment
 - (E) Answer not known
- .74. How does NBC part 4 ensure the safety of occupants during a fire emergency?
 - By requiring high rise buildings to have fireman lifts
 - (B) By recommending the use of wooden materials
 - (C) By mandating the use of solar-powered fire alarms
 - (D) By requiring open stairwells for better ventilation
 - (E) Answer not known
- 75. How does the solution pump in a vapour absorption refrigeration system operate?
 - (A) Compress the refrigerant
 - Increases the absorbent solution pressure
 - (C) Cools the refrigerant vapour
 - (D) Generates heats for absorption
 - (E) Answer not known

- 76. How does a ground source heat pump (GSHP) extract heat from the ground?
 - (A) Using solar panel
 - Circulating a water/anti freezing mix in ground pipes
 - (C) Burning fossil fuels
 - (D) Converting wind energy
 - (E) Answer not known
- 77. How does 'enthalpy' refer to in air conditioning?
 - Total heat energy in air (Sensible + Latent)
 - (B) Moisture content Vs. Saturated air content
 - (C) Heat energy causing temperature change
 - (D) Moisture amount in a unit mass of air
 - (E) Answer not known
- 78. Choose the best components which provides a 110 V supply with multiple 16 amp double pole sockets for portable tools?
 - (A) ISA Incoming Site Assembly (ISA)
 - (B) TA Transformer Assembly
 - (C) Main Distribution Assembly MDA
 - Socket Outlet Assembly SOA
 - (E) Answer not known

- 79. How does the lumen method determine the number of light fixtures required in a space?
 - By dividing the total light output needed by the lumen output of each fixture
 - (B) By measuring the space dimension
 - (C) By assessing the color temperature
 - (D) By evaluating furniture and decor
 - (E) Answer not known
- 80. Choose the correct one: What is the typical ground temperature range at 15 meters below the surface for a ground source heat map?
 - (A) 0° to 5° C

(B) 5° to 8°C

8° to 12°C

- (D) 12° to 15°C
- (E) Answer not known
- 81. How did the design of the Hagia Sophia Dome influence it's structural stability?
 - (A) By using external flying buttresses to reinforce the dome's support
 - (B) By incorporating a double dome structure to enhance overall stability
 - (C) By integrating metal reinforcements around the dome for additional strength
 - By employing pendentives to channel the dome's weight to the arches
 - (E) Answer not known

82.	How	How does architecture meet psychological needs in building design?									
	(A)	By using materials that ensu	re structural integrity								
	(8)	By incorporating elements that make users feel safe comfortable									
	(C)	By maximizing the use of space for machinery									
	(D)	By following traditional build	ing practices only								
	(E)	Answer not known									
83.		dome of Hagia Sophia is car icircular arches carried on pier	ried on —————————— between the son the outside of the square.								
	(11)	Pendentives	(B) Squinches								
	(C)	Semidomes	(D) Buttresses								
	(E)	Answer not known									
84.	The	best example of a Roman sport	s stadium is								
	(A)	Theatre Epidaurus									
	D	The circus maximums, Rome									
	(C)	The large theatre, Pompeii									
	(D)	The theatre of Marcellus, Rome									
	(E)	Answer not known									
85.	The	terrace in Sanchi Stupa is calle	ed as								
		Medhi	(B) Arda								
	(C)	Harmika	(D) Berm								
	(E)	Answer not known	(2) 20111								
	(11)	I HISWOI HOU KHOWH									

86.	The	study	of	signs	and	symbols	as	elements	of	communicative
	beha	viour i	s							•

(A) Symbiosis

(B) Sanctile

Semiotics

(D) Shoro

- (E) Answer not known
- 87. How were the streets and drainage systems typically organized in Indus Valley cities?
 - (A) Randomly with open ditches
 - In a grid pattern with covered drains
 - (C) Circular layout with above Ground channels
 - (D) Parallel streets with underground tunnels
 - (E) Answer not known
- 88. Why were Chaitya Halls primarily designed with an apsidal or semicircular end?
 - (A) To create a grand entrance for visitors
 - To accomodate large gatherings and facilitate the circum ambulation of a central stupa
 - (C) To support multiple levels of seating for larger audience
 - (D) To ensure better acoustics for religious ceremonies
 - (E) Answer not known

89.	How did the introduction of Gopuram influence Hindu Temple design in South India?									
		By adding decorative gateway with intricate sculptures								
	(B)	By incorporating large central Domes in the temple complex								
	(C)	By expanding the temple to include multiple courtyard								
	(D)	By emphasizing the use of colonnaded halls								
	(E)	Answer not known								
90.		According to vitrunus, why was the circle important in Roman theatre?								
	(A)	(A) Durable structure								
	(B)	Optimal stage and audience interaction								
	(C)	Allignment with coordinal direction								
	(D)	Easier construction .								
	(E)	Answer not known								
91.	How does the Lingaraja Temple in Bhuvaneswar exhibit an additive form?									
	(A)	By using monolithic structure								
	(B)	By expanding with smaller shrines and pavillions								
	(C)	By focusing on vertical forms								
	(D)	By using modern techniques								
	(E)	Answer not known								
92.		————— colour uses different values of a single colour.								
	(A)	Dichromatic Monochromatic								
	(C)	Panchromatic (D) Void								
	(E)	Answer not known								

28

323-Architecture

- 93. The South Indian Hindu temple Architecture is in the style
 - (A) Indo Aryan

(B) Dravidian

(C) Nagara

- (D) Orissan
- (E) Answer not known
- 94. Reason and Assertion type

Assertion : Antoni Gaudi's design the Palau Guell featured

elaborate wrought iron gates and balconies to

reflect its opulence.

Reason: Gaudi used wrought iron extension for its

craftsmanship and decorative appeal.

Both are true – Reason explain why gaudi used wrought iron

- (B) Both are true Reason not explains why gaudi-used wrought iron
- (C) Assertion true Reason false
- (D) Assertion false Reason true
- (E) Answer not known
- 95. How did Mies Van Der Rohe's phrase "Less is more" shape the aesthetic of modern architecture?
 - (A) By encouraging highly decorative and elaborative design
 - By promoting minimalist, functional designs that avoid unnecessary ornamentation
 - (C) By focusing on traditional forms of architecture
 - (D) By promoting the exclusive use of local material
 - (E) Answer not known

96.			d Le st desig		sier's	"Fiv	e points	of	architecture"	impact		
	(A)	By promoting decorative ornamentation and classical forms										
	(C)		By limiting the use of modern materials like glass and steel									
	(D)	-	By emphasizing symmetry and ornamentation									
	(E)	•	swer n	_	-	1001 y	and Oma		cation			
	(E)	AII	swer n	ot Kno	WII				•			
97.	Wh	Which of the following does not come under theories of proportion?										
	(A)	Golden section					(B) M	[odu	lor			
	(C)	Ken Axis										
	(E)		swer n	ot kno	wn		(- -)					
•	()		•			•			•	•		
98.	Mat	Match the following										
	(a)	Legi	slative	Assen	nbly,							
	` ,	_	ndigar		•	1.	Repetitie	on				
	(b)		chi Stu			2.	Hierarch					
	(c)		nayun '	_		3.	Symmet	•				
	` '		dey ope		ıse	4.	Datum	- 3				
	, ,		• -									
		(a)	(b)	(c)	(d)	•		•		•		
	(A)	2	1	4	3							
	(8)	2	3	4	1							
	(C)	1	2	3	4					•		
	(D)	3	2	4	1							

(E) Answer not known

99.	Which of the following building is an example of Art Deco style architecture?									
	VA)	Chrysler Building, New York								
	(B)	Seagram Building, New York								
	(C)	Sears tower, Chicago								
	(D)	Hearst tower, Manhattan								
	(E)	Answer not known								
100.	The traditional Japanese unit of measure is									
	(A)	Jodo · (B) I	Pagoda							
	101	Ken (D) Z	Zen							
	(E)	Answer not known								
101.	Purpose of subtract command on primitive solids in AUTOCAD?									
	VA)	To remove one solid from another, creating a hollow space								
	(B)	To merge two solids into one								
	(C)	To scale down the size of a solid								
	(D)	To subtract a solid from the drawing								
	(E)	Answer not known								
102.		How do you accurately position a hatch pattern using the hatcommand in AUTOCAD?								
	(A)	Drag the pattern after applying it		• .						
	(B)	Use the hatch edit command								
	(0)	Specify the origin and angle in the l	natch creation tab							
	(D)	Resize the pattern to fit the area	·	•						
	(E)	Answer not known	,							

103.		Which of the following is not a valid option when using MTEXT command in AUTOCAD?								
	(A)	Changing text justification								
	(B)	Setting text width								
	10)	Setting character limit								
	(D)	Creating multiple lines of te	xt							
	(E)	Answer not known								
104.	How	do freezing and turning off a	layer differ in AUTOCAD?							
	(A)	A) Turning off affects performance, freezing doesn't								
	(12)	Freezing improves performance, turning off only hides								
	(C)	Turning off is visible in par space	per space; freezing hides in model							
•	(D)	No difference between freezing and turning off								
	(E)	Answer not known								
105.		command is used to dra	aw curved lines							
	W	Spline	(B) Line							
	(C)	Polyline	(D) Mline							
	(E)	Answer not known								
106.	The	command for creating paralle	l line is :							
	(A)	Offset	(B) Options							
•	(C)	Stretch	(D) Explode							
	(E)	Answer not known								

- 107. What does AUTOCAD stands for?
 - (A) Automated Computer Application Design or drafting
 - Autodesk Computer Aided Design or drafting
 - (C) Automated Computer Aided Design or drafting
 - (D) Autodesk Computer Application Design or drafting
 - (E) Answer not known
- 108. How does the mirror command work in creating symmetrical designs?
 - (A) By duplicating objects at an offset distance
 - By flipping objects across a defined axis
 - (C) By rotating objects around a specific angle
 - (D) By combining two separate objects into one
 - (E) Answer not known
- 109. Why would you use the audit command instead of purge command in AUTOCAD?
 - Audit repairs drawing errors while purge removes unused objects
 - (B) Audit scales objects, while purge rotates them
 - (C) Audit removes the unused objects while purge repairs drawing errors
 - (D) Audit rotates objects, while purge scales them
 - (E) Answer not known

110.	How does the explode command modify blocks or polyline in AUTOCAD?										
	(A)	Explode scales blocks and polylines to a different size									
	(B)	Explode rotates blocks (or) pol	yline	es arou	nd a s	pecific	poin	t			
	4	Explode breaks blocks into segments	pa	rts (o	r) pol	lylines	to	line			
	(D)	Explode trims blocks and poboundary	olylir	nes to	fit wi	ithin a	def	ined			
	(E)	Answer not known									
111.	The command aliases 'H' denotes										
	M	Bhatch	(B)	Hoggle	e						
	(C)	Hatsoff	(D)	Divide	;						
•	(E)	Answer not known		•		-					
112.	The command aliases "EX" refers to										
	(A)	Extrude	(B)	Exten	d						
•	(C)	Erase	(D)	Ellipse	э .			•			
	(E)	Answer not known									
113.	The	command aliases "DT" denotes		,							
	(11)	DTEXT	(B)	DTP							
	(C)	DIST	` '	DDT							
•	(E)	Answer not known	` /	,			•				

114.	The	The command aliases 'UNI' means								
	(A)	Unicorn	Union							
	(C)	Unite	(D) Unit							
	(E)	Answer not known								
115.	Wha	t does the 'Spline" tool in 3Ds n	nax primarily allow you to do?							
	W	Create a curved paths and sha	apes							
	(B)	Generate complex 3D meshes								
	(C)	Apply textures to an objects								
	(D).	Control camera angles and vie	ews ·							
	(E)	Answer not known	•							
•		oring? Symmetry modifier	create a symmetrical object by (B) Mirror tool							
	(C)	Transform tool	(D) Align tool							
	(E)	Answer not known	(-,							
	· ·	· · · · · · · · · · · · · · · · · · ·								
117.	Why	is global illumination importar	nt in Sketchup rendering?							
	(A)	Elliminates need for artificial	lights							
·	(B)	Improves speed without quali	ty loss							
	(0)	Calculate light bounces for rea	alism							
	(D)	Focuses on direct sunlight onl	y .							
	(E)	Answer not known								

- 118. Why is the 'Materials' panel important for realistic visualizations in Sketchup?
 - (A) It speed up model creation
 - It allows user to add colors and textures for a more realistic look
 - (C) It merges all surfaces into one material
 - (D) It reduces file size
 - (E) Answer not known
- 119. Why is it important to use components instead of groups for repetitive objects in Sketchup?
 - Components reduces file size and make edits globally
 - (B) Components automatically change the color of grouped objects
 - (C) Components improve rendering speed but are harder to edit
 - (D) Components cannot be copied
 - (E) Answer not known
- 120. Why is the push pull tool consider one of the most versatile tools in Sketchup?
 - (A) It is used to create layers
 - (B) It only moves objects vertically
 - It extrudes flat surfaces into 3D shapes
 - (D) It colors surfaces automatically
 - (E) Answer not known

- 121. How does Solid Waste Management System works?
 - $A \rightarrow Waste Handling$
 - $B \rightarrow Transfer and Transport$
 - $C \rightarrow Waste Generation$
 - $D \rightarrow Collection$

(B) $B \rightarrow C \rightarrow D \rightarrow A$

(C) $A \rightarrow C \rightarrow B \rightarrow D$

- (D) $D \rightarrow C \rightarrow A \rightarrow B$
- (E) Answer not known
- 122. The major gas with other chemical solvent that is responsible for depletion of ozone layer
 - (A) Sulphur Dioxide (SO₂)
 - (B) Carbon Monoxide (CO)
 - Chloro Fluoro Carbons (CFC's)
 - (D) Carbon Dioxide (CO₂)
 - (E) Answer not known
- 123. How are gaseous contaminants controlled
 - (i) Open dumping and land filling
 - (ii) Absorption
 - (iii) Open collection and recovery system
 - (iv) Combustion
 - (A) (i) and (ii)

(B) (ii) and (iii)

(C) (iii) and (iv)

- (ii) and (iv)
- (E) Answer not known

- 124. Which statement is correct in respect to Water Pollution?
 - (A) High copper levels benefits respiratory health
 - Iron and manganese discolor clothes while washing in it
 - (C) Copper has no effect on lungs
 - (D) Iron and manganese are beneficial for washing clothes
 - (E) Answer not known
- 125. Which Indian standards specifies or provides the specification of Industrial effluent allowed for discharges into the water courses?
 - IS 2490 1963
- (B) IS 3490 1964
- (C) IS 2490 1964
- (D) IS 3490 1963
- (E) Answer not known
- 126. The main source for Water Pollution are
 - Industrial sewage and Domestic sewage
 - (B) Construction Waste
 - (C) Debris
 - (D) Garbage
 - (E) Answer not known
- 127. Select the incorrect statement, in case of the characteristics of Industrial Waste
 - (A) It contain substances with radio activity
 - B.O.D. is lower than that of ordinary sewage
 - (C) Temperature may be too high or too low
 - (D) May be acidic or alkaline
 - (E) Answer not known

128.	As per nomenclature class of Water–Class E Water is used for					
	(A)	Out Door Batting	(B) Drinking Water			
	(C)	Fisheries	(E) Irrigation			
	(E)	Answer not known				
129.	The	e Max BOD Level in Class A wat	er is said to be			
,	(1)	2 mg/L	(B) 3 mg/L			
	(C)	4 mg/L	(D) 5 mg/L			
	(E) ·	Answer not known	•			
130.		a single stack system what cance from a fixture to stack be	should be the Max Horizontal			
	(A)	3500 mm	(B) 3000 mm			
•	(C)	3400 mm	(D) 3250 mm			
	(E)	Answer not known				
131.	Ide	ntify the state of forms the wate	r can be			
	(i)	Solid				
	` '	Semi Solid				
		Liquid				
	(iv)	Gas/Vapour	· · · · · · · · · · · · · · · · · · ·			
	(A)	(i) (ii) (iii) (iv)	(B) (i) (iii) (iv)			
	(C)	(i) (ii) (iii)	(D) (ii) (iii) (iv)			
	(E)	Answer not known				

,								
132.	Ident proce	tify the types of parameteess:	rs consi	idered	in	water	trea	tment
	(i)]	Physical		•				
	(ii) (Chemical						
	(iii)	Biological						
	(iv)	Organoleptic						
	(A)	(i) and (ii)	(B) ((i) (ii) a	ınd	(iii)		
•	(6)	(i) (ii) (iii) and (iv)	(D) ((ii) and	l (iii	i)		
•	(E)	Answer not known						
133.	It is requi	a bed which retain wate ired	r. But	it nev	er	gives	back	when
	(A)	Aquifer	(B)	Aquich	ude			
	(C)	Aquifuge	(D) A	Aquigl	ade		•	

134. Select the incorrect statement.

Answer not known

- (A) Algae metabolism contributes color to water
- (B) Divalent species containing iron and manganese contribute colour to water
- (C) End products of degraded organic matter contribute colour to water
- The taste contribute colour to water
- (E) Answer not known

(E)

135.		reservoir typically used and fluctuations is	for sho	ort-term storage to meet daily
	(A)	Elevated reservoir	(B) Ground-level reservoir
	(C)	Clear water reservoir	•	Service reservoir
	(E)	Answer not known	`	
136.	The	method commonly used to	remov	e suspended solids from water
	(A)	Electro dialysis	(B) Reverse osmosis
	VO)	Coagulation	(D) Distillation
-	(E)	Answer not known	•	•
137.		an automatic device wetion only.	hich a	llows the water to go in one
•	VAS	Reflux valve	(B) Air relief valve
	(C)	Sluice valve	(D) Scour valve
	(E)	Answer not known		
138.	Carb	onate Hardness is mainly	y due to	the presence of
	W	Bicarbonates of calcium	and ma	gnesium
	(B)	Sulphates		
	(C)	Chlorides	·	
	(D)	Nitrates of calcium and	magnes	ium
	(E)	Answer not known		
139.	This	system reduces the amou	ınt of w	astage of water.
	(A)	Continuous system	. 🔨	Intermittent system
	(C)	Fixed system	(D) Dead end system
	(E)	Answer not known		•

323-Architecture

- 162. How do hollow clay products contribute to the efficiency of building construction?
 - (A) By increasing the overall weight of the structure
 - By providing excellent insulation through air-filled voids
 - (C) By reducing the durability of the construction
 - (D) By making the materials less resistant to weather conditions
 - (E) Answer not known
- 163. What adhesive is used to bond veneers in exterior grade plywood to make it waterproof?
 - (A) Casein glue
 - (B) Water-soluble glue
 - (C) Polyurethane adhesive
 - Phenol formaldehyde adhesive
 - (E) Answer not known
- 164. Why is the method wedging suitable for quarrying costly, soft and stratified rocks like marbles?
 - (A) Because it produces a large amount of waste
 - (B) Because it is a quick and inexpensive method
 - Because it minimizes wastage and allows for cutting of slabs
 - (D) Because it requires no special tools (or) equipment
 - (E) Answer not known
- 165. The clay content for feebly hydraulic lime is
 - (A) 0-5%

(B) 5 - 10%

(C) 10 - 15%

- (D) 15 20%
- (E) Answer not known

166.	prep	term ————————————————————————————————————					
	W/S	Earthen ware	(B)	Stone ware			
	(C)	Porcelain	(D)	Ceramic			
	(E)	Answer not known					
167.	For a good building stone, its specific gravity should be greater than						
	(A)	1.2	(B)	1.8			
	(C)	2.4	40)	2.7			
	(E)	Answer not known					
168.	How	does the maturity of	bamboo impac	ct its use in constr	ruction?		
	(A)	Bamboo must be within one year nature to ensure and durability					
	(B)	Younger bamboo is preferred for its flexibility					
	(C)	The maturity of bamboo affects its color					
,		Bamboo must be at least three years mature to ensure strength and durability					
	(E)	Answer not known					
169.	Why enamels are recommended for woodwork?						
	(A)	They absorb moisture effectively					
	(B)	They allow air to pas	ss through the	e wood			
	105	They are quick to dr	y and provide	a hard, glossy sui	rface		
	(D)	They are difficult to	apply				
	(E)	Answer not known		•	•		

170.	170. Why Aluminium paints are used?					
	(A)	To improve the appearance of surfaces				
	(B)	To protect objects from acid fumes				
	(C)	To increase the surface texture				
	(D)	To provide water resistance to	cement surfaces			
	(E)	Answer not known				
171.	paint is prepared by dissolving asphalt or mineral pitches or vegetable between in any types of oil or petroleum.					
	(A)	Asbestos paint	B) Bituminous paint			
	(C)	Cellulose paint	(D) Cement paint			
	(E)	Answer not known	•			
172.	The	concentration of pigment in a p	aint is denoted by			
	VAS	Pigment volume concentration	number (P.V.C.N.)			
	(B)	Pigment concentration (P.C.)				
	(C)	Volume concentration (V.C.)				
	(D)	Pigment concentration number (P.C.N.)				
	(E)	Answer not known				
173.	•	is a protection con	nstructed around mud wall, to			
	prev	prevent damage, dampness and termites.				
	(A)	Plinth	(b) Apron			
	(C)	Cob	(D) Pise			
	(E)	Answer not known				

- 174. How does the physical state of asphalt change with temperature?
 - (A) It remains solid at all temperatures
 - (B) It remains liquid at all temperatures
 - It softens heated and hardens when cooled
 - (D) It becomes brittle when heated and pliable when cooled
 - (E) Answer not known
- 175. Why is tin used for coating sheets in cans and utensils?
 - It is high resistant to corrosion
 - (B) It is poor heat conductor
 - (C) It has high tensile strength
 - (D) It is very hard and brittle
 - (E) Answer not known
- 176. Why are Colt Twisted Deformed (CTD) bars suitable for building purposes?
 - (A) Cheaper than plain bars
 - High strength, yield and bond strength widely used
 - (C) More flexible than other bars
 - (D) No special manufacturing treatment needed
 - (E) Answer not known

existing structures?							
(A)	Assessing color changes in concrete						
(B)	Measuring acoustic impedance of reinforcement						
(0)	Detecting variations	Detecting variations in pulse velocity indicating defects					
(D)	Calculating thermal	conductivity of concrete					
(E)	Answer not known						
Choose the correct one: What is the principal ore from which lead is extracted?							
(A)	Lead carbonate	(B) Lead oxide					
40)	Lead sulphide	(D) Lead chloride					
(E)	Answer not known						
—— man		ling zone or mouth of blast furnace for					
(A)	Stack	(B) Bosh					
VE	Throat	(D) Cylinder					
(E)	Answer not known						
	———— is adopted	to test the workability of concrete.					
(A)	Compression test	(b) Slump test					
(C)	Sieve test	(D) Silt test					
(E)	Answer not known						
	·						
	(A) (B) (D) (E) Choc extra (A) (E) (A) (E) (A) (C)	(A) Assessing color change (B) Measuring acoustic in Detecting variations is (D) Calculating thermal (E) Answer not known Choose the correct one: We extracted? (A) Lead carbonate (E) Answer not known is the feed manufacture of pig-iron. (A) Stack (C) Throat (E) Answer not known is adopted to (A) Compression test (C) Sieve test					

			•			
181.	Maximum energy that a given component can absorb without undergoing any permanent deformation upto elastic limit as					
	(1)	Proof resilience	(B) Resilience			
	(C)	Hardness	(D) Toughness			
	(E)	Answer not known				
182.	The stress at which the elongation of the material take place more quickly as compared to the increase in load					
	(A)	Ultimate point	(8) Yield point			
	(C)·	Elastic limit	(D) Breaking point			
	(E)	Answer not known				
183.	How	the elastic constant varys with	n the elongation of a body?			
	· (A)	The elastic constant is directly	y proportional to the elongation			
	(B)	The elongation does not deper	nds on the elastic constant			
	(0)	The elastic constant is inverse	ely proportional to the elongation			
	(D)	None of these				
	(E)	Answer not known	•			
184.	Stra	in is equal to				
•	whe	re L - original length, SL - char	nge in length			
	(A)	L + SL	(B) $L \times SL$			
	.(C)	L/SL	SL/L			
	(E)	Answer not known				

185.	The	he unit of modulus of elasticity is same as						
	(A)	Stress, strain and pressure						
	(B) Stress, force and modulus of rigidity(C) Strain, force and pressure							
	Stress, pressure and modulus of rigidity							
186.	In equal and opposite forces applied to a body, tend to elongate the stress is							
	(A)	Compressive stress	(3)	Tensile stress				
	(C)	Shear stress	(D)	Transverse stress				
	(E)	Answer not known						
187.	A ra	y to volumetric strain as						
	(A)	Young's modulus of rigidity	(8)	Bulk modulus of elasticity				
	(C)	Shear modulus		Poisson's ratio				
	(E)	Answer not known						
188.	Impact load is an example of							
	(A)	Fatigue load	(B)	Static load				
	(C)	Uniform load	· ` `	Dynamic load				
	(E)	Answer not known						
189.	The load is distributed uniformly over the length of the beam, then the load is							
	(A)	Point load	(B)	Bending load				
	(C)	Distributed load	(B)	Uniformly distributed load				
	(E)	Answer not known	_					
		·						

190.	The f	The following is a dimensionless quantity						
	(A)	Shear stress	(B)	Poisson's ratio				
•	(C)	Strain	(B)	Both (B) and (C)				
	(E)	Answer not known						
191.	The	The following are statically determinate beams						
	41)	Cantilever and simply supported						
	(B)	Only simply supported beam						
	(C)	Fixed beam						
	(D)	Continuous beam	•	•				
	(E)	Answer not known						
192,	Bend	ding moment at supports in S.S. beam						
	(A)	Positive	(B)	Zero				
	(C)	Negative	(D)	Depends upon loading				
	(E)	Answer not known						
193.	Cent	Centre of gravity of a rigid body lies						
	(A)	Outside a body	(B)	Inside a body				
	40)	Either inside or outside	(D)	None of these				
	(E)	Answer not known						

- 194. The factor of safety is defined as the ratio of
 - (A) Working stress to ultimate stress
 - (B) Breaking stress to ultimate stress
 - (C) Ultimate stress to breaking stress
 - Ultimate stress to working stress
 - (E) Answer not known
- 195. The section modulus of a rectangular section with breadth "b" and depth "d" as
 - (A) $\frac{bd^2}{12}$

(B) $\frac{bd^3}{12}$

(C) $\frac{bd^3}{6}$

- $\frac{bd^2}{6}$
- (E) Answer not known
- 196. The bending stress in a beam is directly proportional with
 - The distance from the neutral axis
 - (B) The moment of inertia
 - (C) The polar moment of inertia
 - (D) The radius of curve of the beam
 - (E) Answer not known
- 197. The S.I. unit of torsional rigidity
 - (A)
- $N.m^2$

(B) N.m

(C) N/m

- (D) N/m^2
- (E) Answer not known

198. The polar moment of inertia of a solid shaft of diameter (d) is

(B) $\frac{\pi}{16}d^4$

(C) $\frac{\pi}{16}d^3$

- (D) $\frac{\pi}{32}d^3$
- (E) Answer not known
- 199. The following is an analytical method to find the force in a frame
 - (A) Method of frames
- (B) Method of joints
- (C) Method of hinges
- (D) Method of pins
- (E) Answer not known
- 200. In solid shaft, stress of the centre is

Zero

(B) Maximum

(C) Minimum

- (D) Average
- (E) Answer not known
